

– ABOUT US

Advice You Can Trust, Systems That Last

We don't sell equipment and we have no supplier relationships to protect. Every design decision is driven by your land, crop, water source and climate conditions.

– OUR STORY

Built to do one thing well

Water scarcity is one of the defining challenges facing agriculture in Africa and the Middle East. The farms and projects that will feed the next generation need water infrastructure that works, not just on paper, but in the ground, for decades.

We built Ant Consult around one core belief: that getting the engineering right from the start is the most valuable thing you can do for a farm's long-term productivity.

The right design,
engineered for
long-term performance

We founded Ant Consult to bring a leaner, more structured model to agricultural water engineering. Every project is delivered through a defined engineering process, with senior engineer involvement from start to finish and recommendations shaped entirely by the needs of your operation.

The name comes from the ant. Small, industrious, and capable of building something far larger than itself through discipline and persistence.

– WHAT WE DO

Engineering water from source to field

Ant Consult designs agricultural water infrastructure for large-scale farming operations across Africa and the Middle East. From feasibility studies and development masterplans to irrigation, pumping and bulk water supply, we help clients plan, build and optimise systems that perform reliably for decades.

Every project follows the same structured engineering process, ensuring consistent quality from feasibility through to final design.

– OUR APPROACH

The Ant Implementation Method

Scope drift is one of the most common reasons irrigation projects go over budget or deliver the wrong outcome. The Projects Team defines a scope. The Operations Team has a different vision. By the time everyone is aligned, the process has already cost you time and money.

We designed AIM to get the right people around the table early, asking the right questions, and stress-testing the first draft design before it becomes the final one. The result is a system your full management team has signed off on, built to a scope that reflects what your operation needs.

01

ALIGN

Get the right people around the table

02

CHALLENGE

Stress-test the initial design

03

AGREE

Build alignment before detailed design

04

IMPLEMENT

Deliver against an agreed scope

– WHY CLIENTS WORK WITH US

Precision in design. Confidence in delivery.

Our work is measured at the point where the design meets the ground. That means construction-ready drawings your contractors can build from without guesswork, detailed bills of quantities with no expensive surprises, and systems your team can operate without ongoing intervention.

ANT Consult has been a trusted business and technical partner in our sugar-sector work. Their expertise extends well beyond sugar, and we look forward to expanding our collaboration into new opportunities and industries.

Michael Day
Director

WE STAND BEHIND OUR WORK

If your irrigation system is not performing as intended, we will provide a complimentary technical review to identify the cause, optimise system performance, and train your team on effective operation.

– OUR VALUES

Work to the Glory of God

We strive to work excellently and honourably in every project, recognising that the quality of our work reflects the character behind it.

Value Our Partners and Clients

Clients are integral members of the project team and we believe the best outcomes come from strong working relationships.

Continual Improvement

We continuously learn, adapt, and improve so that our knowledge and methods remain relevant in a changing industry.

Walk Lightly on the Earth

Sustainability is not a marketing position. It is an engineering responsibility reflected in every decision we make.

Humble and Accessible

We recognise that expertise is built through listening. The farmers and operators who use the systems we design every day provide valuable insight that helps us create better solutions.

– OUR TEAM

We operate with a small permanent team, supported by a network of specialists who are brought in based on project requirements. This allows us to scale for large, complex projects without carrying the overhead of a large practice.

You get the right expertise for your project, not an ad hoc effort from the guy in the next office who has time on his hands.

Jon Kirkman, PrEng BSc Eng Agric.

Jon founded Ant Consult to bring structured, independent engineering to large-scale agricultural water infrastructure. He is a degree-qualified Agricultural Engineer (UKZN) and a Registered Professional Engineer with the Engineering Council of South Africa. His work spans irrigation design, bulk water supply, feasibility studies and masterplanning across Africa and the Middle East. Jon is personally involved in every project Ant Consult undertakes, providing clients with direct access to senior engineering expertise from concept through to delivery.

Joana Banne, Marketing Coordinator

Joana manages Ant Consult's marketing and communications, including the website, content strategy and client-facing materials. With a background in Agricultural Biotechnology and B2B marketing, she translates complex engineering concepts into clear, practical information that helps clients make informed decisions.

ASSOCIATED EXPERTS

Steve Mann, Civil Engineering

With over 30 years of experience in civil engineering, Steve specialises in water, stormwater, sewer and road infrastructure design. He supports Ant Consult on projects requiring specialist civil engineering expertise, bringing practical design experience and technical precision to complex infrastructure developments.

Stefan van Veenendaal, Surveyor and Town Planner

Stefan is a registered Professional Land Surveyor and Professional Planner with expertise in land surveying, master planning and spatial development. His work brings surveying and planning expertise that supports practical, well-informed agricultural and land development projects.

Noel Stevens, Quantity Surveyor

Noel is an experienced Quantity Surveyor supporting greenfield and brownfield infrastructure projects. He provides cost planning, project evaluation and technical advisory services, and acts as a technical expert on complex engineering matters.

Jed Sherwood, Civil Engineer

Noel is an experienced Quantity Surveyor supporting greenfield and brownfield infrastructure projects. He provides cost planning, project evaluation and technical advisory services, and acts as a technical expert on complex engineering matters.

Andrew Butler, Agricultural Engineer

With over 30 years of experience in civil engineering, Steve specialises in water, stormwater, sewer and road infrastructure design. He supports Ant Consult on projects requiring specialist civil engineering expertise, bringing practical design experience and technical precision to complex infrastructure developments.

Hans Veenstra, Sugar Cane Management Expert

Noel is an experienced Quantity Surveyor supporting greenfield and brownfield infrastructure projects. He provides cost planning, project evaluation and technical advisory services, and acts as a technical expert on complex engineering matters.
